

Is your child fully vaccinated?

NHS

Southern Health
NHS Foundation Trust

The School Age Immunisation Service records shows over 10% of Year 9 pupils have not had their MMR vaccine. You can still make an appointment through your GP.

MMR

Measles is a highly contagious viral illness that was common in childhood but is now rare due to the MMR vaccination programme. The MMR vaccine is the safest and most effective way to protect anyone against measles, mumps and rubella. Over 99% of those who have 2 doses of the MMR will be protected against measles and rubella.

HPV

If your child missed out on these three routine vaccines in school this year you will be able to fill a consent form in September. Where there is already consent, your child will be vaccinated at the next school session or community clinic.

MenACWY

3in1 teenage booster

(diphtheria, tetanus, polio)
